PROJECTS

Multiple Disease Detection and Health Tracking System | Python, Flask, scikit-learn

2025

- Developed an **intelligent health assistant** capable of predicting multiple diseases using user symptoms and vital signs.
- Implemented modules for **secure data handling**, input validation, and multi-output disease prediction to ensure reliable medical analysis.
- Built using **Python, Flask, JavaScript, and scikit-learn** with attention to safe API routing and structured medical data processing.

Student Marks Management System | Java, JSP, JDBC, MySQL

2025

- Developed a **full-stack web application** for managing student academic records using Java Servlets, JSP, and MySQL.
- Implemented **CRUD operations** with session management and MVC architecture for clean backend workflow.
- Ensured **secure database access** using prepared statements to prevent SQL injection and unauthorized data modification.

Online Agribusiness Portal | HTML, CSS, JavaScript, MySQL

2025

- Built a **web portal** to simplify agricultural subsidy applications through a clean and user-friendly interface.
- Implemented **basic web security practices** including form validation and safe data storage with MySQL to protect user information.
